

## Claims

1. An electrical device for attachment to a holder, particularly in a vehicle, wherein the electrical device (1) is attached to the holder (2) in a first connection  
5 by means of at least one hook (41, 42), wherein the electrical device (1) can pivot in relation to the holder (2) because the at least one hook (41, 42) can pivot in relation to the holder (2, 71, 72), and wherein the electrical device (1) can be locked to the holder (2) in a second connection (36, 50).
- 10 2. The electrical device according to claim 1, characterized in that the at least one hook (41, 42) is provided on the electrical device (1, 31) and that a receptacle (71, 72, 81) for the at least one hook (41, 42) is embodied on the holder (2).
- 15 3. The electrical device according to claim 2, characterized in that a pin (81) is provided on the receptacle (71, 72), that a hole (43, 44) for accommodating the pin (81) is provided in the hook (41, 42), and that the pin (81) secures the hook (41, 42) in the receptacle (71, 72).

4. The electrical device according to one of the preceding claims, characterized in that a top (31) of the electrical device (1) can be attached to an underside (70) of the holder (2).

5            5. The electrical device according to one of the preceding claims, characterized in that the electrical device (1) can be locked to the holder (2) by means of a pivoting catch (36).

10           6. The electrical device according to claim 5, characterized in that the catch (36) engages an edge (50) of the holder (2).

15           7. The electrical device according to one of claims 5 to 6, characterized in that the pivoting catch (36) that is preferably provided on the electrical device (1) is disposed on a pivoting ratchet (35).

20           8. The electrical device according to one of the preceding claims, characterized in that the electrical device is provided with a detent mechanism that automatically engages with the holder (2) in detent fashion when the electrical device is pivoted against the holder.

25           9. The electrical device according to one of the preceding claims, characterized in that the locking (35, 36, 50) of the electrical device to the holder (2) is secured by means of a lock (6, 37).

30           10. The electrical device according to one of the preceding claims, characterized in that the electrical device (1) has at least one housing (30) and an electrical component (9), that the electrical component (9) is fastened inside the housing (30), and that the at least one hook (41, 42) is provided on the housing (30).

11. The electrical device according to one of the preceding claims, characterized in that the housing (30) of the electrical device (1) is at least partially covered with a protective layer (47) made of a plastic material.

5           12. The electrical device according to one of the preceding claims, characterized in that a plug connection (40) is provided on a side of the electrical device (1) oriented toward the holder (2).

10           13. The electrical device according to one of the preceding claims, characterized in that the electrical device (1) has at least one display unit (9), preferably a cathode ray tube display.

            14. A holder for mounting an electrical device according to one of the preceding claims.

15

            15. The holder according to claim 14, characterized in that the holder (2) is mounted to the underside (3) of a vehicle roof, a luggage rack, or a ventilation conduit.
